

The Benefits of Fairlawn turf

Safety- Temperature

The plant-based infill absorbs natural moisture and slowly releases it back into the atmosphere in an evaporative cycle similar to natural grass. This along with the inherent low bulk density of the organic material are the only two critical factors that significantly reduce turf temperatures. The FIFA Method 14 test classifies Greenplay as a Category 1, same as grass at <122°F.

Safety- Abrasion

Some landscape turf can be abrasive. This can be an issue with children running and sliding on the lawn. Fairlawn uses a proprietary fiber formula that reduces the abrasiveness of the surface to be more like grass. The abrasive index of natural grass is rated as 20 (ASTM F1505), Greenplay's average rating is 21.

Stability- Infill Matrix

Greenplay utilizes a proprietary production technique to fortify the blend with additional natural fibers that create a matrix within the infill layer, which binds and stabilizes itself within the turf fibers. Once settled, this cohesive matrix provides unmatched stability.

Environment

The Greenplay in Fairlawn turf systems is pesticide-free, non-toxic and 100% recyclable in nature. A sole source of the materials at the site of production guarantees quality. Greenplay absorbs over 150% of its weight in moisture. Fairlawn only requires 10% of the water needed for natural grass.

Value- Affordability

A critical benchmark was to make the Fairlawn accessible to meet most budgets. The components in this system were engineered to achieve the utmost in beauty, safety and affordability.

PROGREEN BRINGS THE SCIENCE

American made polymer technology shapes each and every grass fiber. Decades of research, manufacturing and installation expertise provide the performance, durability and beauty built into every ProGreen lawn since 1987. ProGreen's Fairlawn series of artificial lawns are designed specifically to optimize the benefits of a natural turf filler.

That's half the story...

GREENPLAY BRINGS THE NATURE

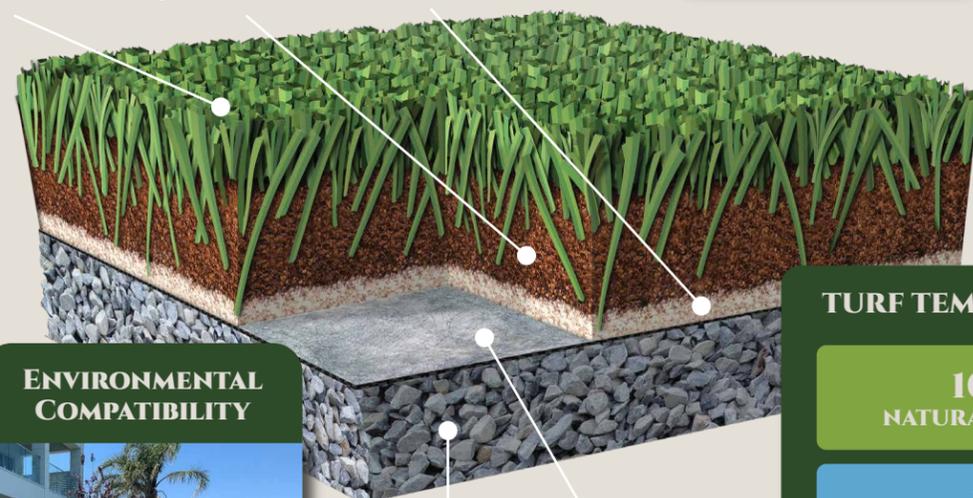

Greenplay is America's natural infill company, nationally proven for use in private and public schools as the safest and most environmentally compatible turf filler. Natural and durable coconut fibers are harvested from pesticide-free crops and blended with pure cork granules to fill the turf and work safely and in harmony with the natural surroundings.

The only dual-fiber landscape turf

GreenPlay organic infill

Sand for ballast

Backing to lock fibers in place

Gravel for drainage

FAIRLAWN BRINGS THE BEAUTY

The Fairlawn Series is specifically designed to bring the look and feel of artificial lawn to a higher level. It's all about the grass-like experience of natural beauty, safety/comfort and environmental compatibility.
